

Contents

1. Introduction	4
2. Background	4
2.1. Parallel-in-Time Integration (PinT)	4
2.1.1. Parareal	4
2.1.2. Multigrid Reduction in Time (MGRIT)	4
2.1.3. Parallel Full Approximation Scheme in Space and Time (PFASST)	4
2.2. High-Performance Computing	4
2.2.1. Multi-threading & GPU Computing	4
2.2.2. Multi-processing & Distributed Computing	4
2.3. Equations of Motion	4
2.3.1. Differential Equations	4
2.3.2. Traditional Numerical Methods	4
2.4. Analog Cosmology	5
2.4.1. BEC Analogs of FLRW Cosmologies	6
2.4.2. Variable Speed of Sound and Inflation	6
2.4.3. The Field Equation	6
2.4.4. Phononic & Free Particle Modes	7
2.4.5. Initial Conditions	8
2.4.6. Particle Production	8
3. Methods	9
3.1. The Parareal Algorithm	9
3.2. The Parareal Algorithm at Scale	10
4. Discussion	12
4.1. Numerical Analysis	12
4.1.1. Convergence	12
4.1.2. Stability	12
4.1.3. Error	12
4.2. Algorithm Analysis	12
4.2.1. Time Complexity	12
4.2.2. Space Complexity	12
4.3. Benchmarks	12
5. Showcases	12
5.1. Nonlinear ODE: The Pendulum	12
5.2. PDE: The Wave Equation	12
5.3. Particle Production in Analog Cosmologies	13
6. Conclusion	13
6.1. Future work	13
Bibliography	14
