
1. POMA OVERVIEW

Proceedings of Meetings on Acoustics (POMA) is an editor-reviewed, open-access, online journal published by the Acoustical Society of America (ASA). Articles originate as papers presented at semiannual ASA meetings or at other cosponsored meetings. Both researchers and practitioners are encouraged to submit manuscripts to POMA.

Because of rapid editorial processing, the Proceedings offers a timely venue for viewing the most current work in the broad field of acoustics. All manuscripts are reviewed from the standpoints of clarity and correctness by an Associate Editor and are published online shortly after being accepted.

Articles are published within volumes tied to Society meetings and typically organized by primary topical area: Acoustical Oceanography, Animal Bioacoustics, Architectural Acoustics, Biomedical Acoustics, Computational Acoustics, Education in Acoustics, Engineering Acoustics, Musical Acoustics, Noise, Physical Acoustics, Psychological and Physiological Acoustics, Signal Processing in Acoustics, Speech Communication, Structural Acoustics and Vibration, and Underwater Acoustics.

2. POMA POLICIES

A. ELIGIBLE SUBMISSIONS

Papers from any prior ASA meeting or from designated cosponsored conferences are eligible for submission to POMA.

B. ASA SPECIAL SESSION SUMMARY

C. ELIGIBLE SUBMISSIONS

Special session organizers at ASA meetings have the option of submitting summaries of these sessions. These POMA articles provide a written, archived record of important sessions that honor colleagues, provide historical perspectives, and detail research advances in technical specialties and new topics. A few notes on the submission process of a session summary:

- During submission, please replace “Paper Number” with Special Session (e.g., Noise: Special Session 4aNS).
- Please title your manuscript as a summary of the session name (e.g., Summary of “<Insert Session Name>”).

i. Acceptance Criteria

In principle, any ASA meeting paper, including case studies and preliminary or limited-scope investigations, is suitable for POMA. The criteria of clarity and correctness are intended to ensure manuscripts reflect the high-quality work presented at ASA meetings. Authors are expected to:

- Present their work in clear, grammatically correct English
 - Lay out the camera-ready manuscript in a professional manner
 - Ensure all figures are readable and attractive
 - Ensure figures are accompanied by sufficient explanatory text
 - Provide adequate reference to prior literature used in the work
-

-
- Strive for technical correctness. While the level of review does not approach that of JASA, POMA does not intend to publish any paper where the initial premises, reported results, or conclusions are wrong.

Reasons for ultimately rejecting a POMA manuscript include prior publication or copyright violations, promotion of commercial products, technical unreasonableness, or failure to make changes as indicated by the associate editor or manuscript manager.

D. COPYRIGHT

Although POMA is open-access, articles published in POMA are copyrighted by the ASA unless authored by a U.S. or Canadian government employee as part of his/her official duties. The ASA copyright agreement form explains how POMA authors retain extensive rights as to subsequent use of articles, including allowing republication and reposting.

If authors wish to use copyrighted material in an article, it is their responsibility to obtain permission from the copyright holder.

E. PRIOR PUBLICATION

Publication in POMA does not constitute prior publication by the Acoustical Society of America's fully-reviewed journals, The Journal of the Acoustical Society of America and JASA Express Letters.

F. PUBLICATION DATE

POMA articles are published online in volumes associated with meetings of the ASA. The POMA volume date corresponds to the date of the ASA meeting, and the POMA publication date is the date an individual POMA article was published. Since POMA accepts papers from any previous ASA meeting, the volume date and publication date may differ. Both dates appear on the downloaded article pdf and on the article webpage. Authors should be aware that the citation generated by article webpage uses the volume date, whereas the copyright uses the publication date. When citing a POMA article, authors are encouraged to use the publication date, which will always be the more recent date, as well as to include the doi number that uniquely identifies each POMA paper.

3. MANUSCRIPT PREPARATION AND SUBMISSION

To help authors prepare the article cover page and manuscript files, the checklist used by the POMA manuscript manager in the initial quality review is located at <http://scitation.aip.org/pma/info/policies> under the author instructions.

A. ARTICLE METADATA

The manuscript does not contain author information or the abstract. Those form the article cover page that is created at the time of publication. When preparing these data for the submission,

- The corresponding author should review and update his or her author profile, as author name, affiliation, and email address will be pulled automatically from the profile for the cover page and article webpage. Corresponding authors should likewise ensure that other author names, affiliations, and email addresses are correct in the submission metadata. Note that changes
-

in author order or additions are acceptable, but any deletions must be accompanied with an explanation in the Submission Comments.

- The abstract need not be identical to the conference-submitted version. Rather, the abstract should be updated to contain results and principal conclusions. Additionally, acknowledgments should be included at the end of the manuscript, not enclosed in brackets in the abstract (as is done in ASA meeting abstracts).
- The article title need not be identical to conference-submitted version. In fact, because the POMA article can get lost as part of “Other Versions” in Google Scholar or be simply be mistaken for a conference abstract, renaming the article slightly is a wise strategy. When entering the title in the submission field, use proper formatting; only the first letter of the title and proper nouns are capitalized.
- Note that there is a relatively new journal section, “Computational Acoustics.” This allow authors to have their work involving numerical modeling or data science in any area of acoustics to be appropriately placed in this section. Authors must select this section at the time of submission. The POMA cover page from a regular ASA meeting will read, e.g. “Computational Acoustics: Paper 2aNS3”. The name of the section identifies the work as being computational, and the paper number identifies as having been presented in a Noise session.

B. MANUSCRIPT FORMAT

All manuscripts submitted to POMA must be camera-ready pdf files corresponding to a talk or poster. The paper should look like a proceedings paper from a mainstream technical society. This L^AT_EX document with the associated style document `poma_style.sty` may be used as a template. It is strongly suggested authors use this or the MS Word template to expedite processing. Alternatively, authors may visit the POMA website to view recent papers for suitable formats (<https://asa.scitation.org/toc/pma/current>), but should recognize that not every previously published article is still considered acceptable. Papers that represent a collection of slides with little or no accompanying text will ordinarily require significant revision.

i. Guidelines

The following manuscript guidelines apply:

- File begins with the introduction (cover page already contains author information)
 - 8.5 × 11 inch page in portrait orientation
 - No page numbers and no headers/footers of any sort. These are added during publication
 - 12 pages maximum for the manuscript file (13 pages total, including cover page)
 - 1-inch side margins and at least 0.75-inch top/bottom margins
 - Font should be 10-12 pt and single-spaced. Times New Roman is used to generate the cover page and manuscript header and footers, but other fonts (e.g., Arial, Calibri, Cambria, Courier) are allowed.
 - Figures or tables must be embedded in the pdf file consistent with a camera-ready document, rather than grouped at the end
 - Color figures are encouraged
 - If slides from the talk are to be used directly as figures:
-

Table 1: Sample rocket parameters.

Parameter	Symbol	Value
Thrust	T	870 kN
Diameter	D	1.2 m
Centerline velocity	v_j	2000 m/s

- Adjust figure resolution to minimize file size while maintaining sufficient quality
- No more than two slides per page
- All header and footer information unnecessary for conveying scientific content should be removed, including logos and slide numbers
- Each slide should have a figure number and caption, and that figure should be referenced explicitly in the text, as is customary for a written paper.

Including the package `poma_style.sty` will incorporate most of these guidelines automatically.

ii. Including references, figures, tables, and equations

A POMA manuscript will normally have references and some combination of figures, tables, and equations. In this template document, there are included text styles for both captions and references. Figure and table captions should be centered if they are only one line and be full justified if they are longer than one line. Additional instructions regarding inclusion and automated numbering of, and cross-referencing to, these different elements are given below.

A separate References section should be at the end of the document and labeled References or Bibliography. This allows Google Scholar and other indexing services to locate them. No specific formatting is required, but either of the two JASA formats is preferred. References may be inserted as endnotes just below the “Reference” heading, allowing for easy cross-referencing throughout the document or inserted manually. An example endnote is included here.¹ While in this template the bibliography is fully incorporated into the .tex file, any method of generating the bibliography is acceptable.

When referencing to figures, the abbreviation “Fig.” followed by the figure number should be used, except when the reference comes first in a sentence, where “Figure” should replace “Fig.” Two example sentences referencing a figure are: Figure ?? shows a distant view of GEM-60 solid rocket motor firing along with some geometry. As can be seen in the pictures in Fig. ??, snow covered the ground during the experiment.

References to tables are never abbreviated. As an example, rocket specifications for the rocket motor in Fig. ?? are provided below in Table 1.

Equations should ordinarily be numbered, which is performed automatically by L^AT_EX. The following sentence illustrates cross referencing to a figure and an equation: The noise from the rocket plume in Fig. 1 can be modeled using the cylindrical wave functions in Eq. (1).

$$\Phi_{l,k_z}(r, \phi, z) \equiv \frac{H_l^{(1)}(k_r r)}{H_l^{(1)}(k_r r_0)} e^{il\phi} e^{ik_z z}, \quad r \geq r_0. \quad (1)$$

iii. External Links and Multimedia

Because active external hyperlinks in the manuscript are preserved in the submission and production process, authors can include clickable links to websites and online multimedia content. Multimedia cannot be directly embedded into manuscripts at the present time.

4. SUBMISSION

Manuscripts are submitted via <http://www.editorialmanager.com/poma/> as a camera-ready pdf document. Users new to Editorial Manager must create a user account or, alternatively, can log in with their ORCID account (see <http://orcid.org>). See Sec. 3.1 on “ARTICLE METADATA” – the author-entered information here will be used in creating the cover page and Scitation webpage. The corresponding author is responsible to ensure accuracy. ASA Meeting information and paper numbers may be retrieved at .

5. EDITORIAL PROCESS OVERVIEW

1. The author prepares the pdf cover page and manuscript as separate pdf documents.
 - (a) Do not upload Word or .tex files to Editorial Manager.
 - (b) Author metadata must be current, complete, and correct, so that the cover page generated by the POMA Editorial Office will reflect accurate information.
2. If applicable, coauthor approval should be obtained prior to submission. Coauthors will be required to confirm their approval during the editorial process.
3. The corresponding author logs onto POMA Editorial Manager, fills out the required submission information, and uploads the cover page and manuscript in pdf format.
4. The POMA Manuscript Manager performs an initial quality check of the manuscript, in accordance with the checklist.
5. Once the article passes the initial quality review, the assigned Associate Editor reviews the manuscript for clarity and correctness. In unusual cases or for some cosponsored meetings, external reviewers may be consulted.
6. The corresponding author receives an email indicating acceptance, rejection, or required revisions.
7. After acceptance, the POMA Manuscript Manager prepares the article to appear within the appropriate POMA volume on Scitation.

6. CONCLUSION

A conclusion or concluding discussion should be included.

ACKNOWLEDGMENTS

Acknowledgments, if any, follow the conclusion section.

APPENDIX A

Appendices, if necessary, can go here. However, given the scope of a typical POMA article, the use of an appendix would be uncommon.
